

Amplience Extension for SAP Commerce Cloud

SAP® Premium Certified
Integration with SAP Applications

Dynamic media and user-generated-content for SAP Commerce Cloud powered commerce.

The Amplience Extension for SAP Commerce Cloud is an integration accelerator that simplifies the implementation of two Amplience solutions: 'Dynamic Media' and 'Social & UGC'. These solutions extend the SAP Commerce Cloud platform to deliver rich, engaging product and promotional media to all devices, and to incorporate persuasive content gathered from users on social media into the customer journey.

The two solutions, in conjunction with the Amplience Content Hub – which acts as a unified Digital Asset Manager (DAM) to provide a single, on-demand source for all media assets in the cloud – provide a complete platform for online commerce.

Dynamic Media

Amplience Dynamic Media makes it easy for eCommerce teams that use SAP Commerce Cloud to enrich the customer experience with engaging product and promotional images and videos that work responsively to support any channel and device combination – improving site speed and quality.

Dynamic Media additionally supports three advanced use-cases:

Product Badging – which generates image badges that highlight sale, stock levels, newness and other attributes;

Dynamic Bannering which simplifies the production of personalized campaign and promotional media; and

Product Customization, which enables colorization, monogramming and rich product configurators.

Mobile-Ready Hero Imagery – making it easy for consumer goods businesses to deliver optimized product images that significantly improve engagement and conversion on mobile devices.

Key features

- Dynamically render any image variant on demand from a single master asset, based on parameters including size, format, and quality.
- Transcode video to the most suitable format for every device, mobile operating system, and screen resolution.
- Automate the creation of product media sets with scripts and meta-data.
- Create richly responsive product-page media-viewers with the viewer kit
- Badge product media to advertise seasonality, sale and promotions.
- Automate 360° and 720° (up and over) product views and spins.
- Customise, colorize, monogram and personalize product media.
- Support sophisticated product configurators.

Mobile-Ready Hero Images

When shoppers are using their mobile devices to buy consumer goods, they need to recognize brand, product type, pack size and variant type. The problem for some consumer products is that when viewed on a mobile screen, the product hero image is very small, leading to a failed customer experience and poor conversion as a result. This is particularly the case in the grocery retail.

The University of Cambridge Design Group in conjunction with Unilever have created a set of standards designed to help solve this problem. These Mobile Ready Hero Images deliver the visual information that shoppers need in order to make immediate and informed buying decisions.

The creation of Mobile Ready Hero Images looks to be an arduous post production challenge, however Ampliance Dynamic Media allows clients wishing to adopt these standards to create and deliver Mobile Ready Hero Images across product ranges at any scale.

Social & User Generated Content

The Amplience Social and User Generated Content (UGC) solution allows businesses to curate the high-value authentic content that brand advocates create on social channels such as Instagram and Twitter.

Using the SAP Commerce Cloud integration, Social & UGC content can be added to pages using a specialized widget in hybris commerce. This enables content teams to curate and publish shoppable social images into a wide range of contexts including media-walls on landing pages and in carousels on product detail pages, or into style guides, or inspirational look-books, to provide social proof that drives conversions.

Key features

- Set up daily auto-ingestion of assets from Instagram and Twitter, and enable direct upload of user generated content
- Moderate content so that inappropriate content is not featured on site
- Automate the publication of approved media to product detail pages
- Enrich images with product SKUs or destination URLs to enable shoppers to buy directly from social images
- Curate, track, and publish multiple UGC streams to address specific campaigns and product categories
- Render content according to brand specifications, either using pre-built carousels, or by creating custom renders with the viewer SDK
- Advanced event-based analytics for all user interactions, tracking customer engagement to the cart

About Ampliance

Ampliance dramatically simplifies how clients plan, create, manage, and deliver content. With a modern API-first approach, the Ampliance solution can unleash the creativity and productivity of content and technology teams. Ampliance serves more than 200 of the world's leading businesses including Crate and Barrel, Heritage Parts, Boohoo, Mulberry, BMC, and TUMI.
