

RedAlert App Solutions

Professional, Welfare & Companion

Smart lone worker protection, made scalable — three app-based options tailored to risk, with always-on ARC escalation & support

- ✓ No hardware required
- ✓ BS 8484-accredited
- ✓ 24/7/365 instant ARC response

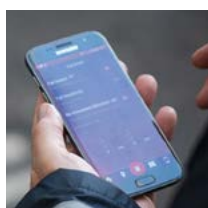

When you need to protect a mobile workforce without additional hardware, RedAlert Apps provide reliable, BS 8484-accredited lone worker protection via smartphone or existing device.

With three options tailored to different risk levels — from low-risk and high-risk roles, to legacy device users — each app offers

a secure way to escalate emergencies and manage risk. All incidents are logged, timestamped, and where required, reviewed and actioned immediately by our fully accredited, UK-based Alarm Receiving Centre (ARC) — so your workforce can operate with confidence, knowing expert assistance is always at their fingertips.

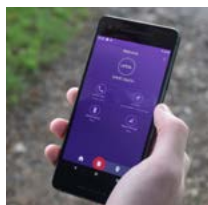

Three flexible options, one trusted system

Designed to adapt to the needs of your workforce, our three app options — **Professional, Welfare & Companion** — ensure your team rapidly receives the right level of protection, without unnecessary costs or complexity.

RedAlert Professional – Robust, app-based protection for high-risk workers

In high-risk environments, your team needs protection that responds instantly. With 24/7/365 ARC monitoring and intelligent escalation, RedAlert Professional delivers faster intervention, improved safety, and total peace of mind. Offering one-touch ARC escalation, secure voice message logging, and real-time visibility to ensure critical events are captured and actioned without delay. Built-in fall and lack of movement detection, along with timed check-in alerts, ensure automated ARC escalation if a user becomes unresponsive or fails to check in at a set time — ideal where communication is limited or a delay could prove dangerous.

RedAlert Welfare – Essential lone worker protection – simple, affordable and smart

Ideal for mobile teams and lower-risk environments, RedAlert Welfare provides cost-effective safety and peace of mind, with instant ARC support or message logging at the touch of a button. Simple and quick to deploy at scale, it's the perfect entry-level option for public-facing teams and distributed workforces.

RedAlert Companion – Legacy-compatible safety – protection from any device, anywhere

RedAlert Companion ensures even the most hard-to-reach or tech-limited remote staff remain protected and connected. Operated by any phone or landline, RedAlert Companion offers manual ARC-backed escalation via a pre-programmed speed-dial, removing the need for modern smartphone access.

Three layers of intelligent protection

Red Alert: An instant live audio link to the ARC, triggered by the user with a single touch in high-risk situations — available with all apps.

Amber Alert: Allows users to record a voice note describing their location and activity before entering a higher-risk environment, providing a valuable audit trail if an incident occurs — available with all apps.

Amber Timer: A configurable countdown that automatically raises an alert if the user fails to check in before the time expires — available with Professional and Companion.

Why clients choose RedAlert Apps

Rapid deployment: Download/deploy and go, for instant protection

No hardware required: Deploy across existing mobile devices instantly

Cost effective: Scalable protection using existing smartphones or landlines

Full compliance: BS 8484-accredited support

Rapid response: UK-based ARC for instant escalation

Clear audit trail: Full logging, timestamps & location data available

App-based scalability: Ideal for growing, dynamic workforces

Intuitive interface: Clean and simple in-app layout, for fast adoption

The result?

Whether your team needs simple one-touch assistance or robust escalation options, RedAlert Apps are cost-effective, quick to deploy, and easy to use — with no additional hardware required. So you can rest assured your workforce is protected and supported, whatever their role.

Solutions for every sector

- ✓ Safety for **social housing** staff when entering homes alone
- ✓ Safeguarding **remote/home workers** with fall & emergency alerts
- ✓ Discreet assistance for **healthcare & outreach** workers in the community
- ✓ **Utility & infrastructure** engineers working in remote areas
- ✓ **Local authority** officers in enforcement or environmental roles
- ✓ **Construction & maintenance** staff on-site or after hours
- ✓ **Transport & logistics** operatives on the move or in depots
- ✓ **Retail & public-facing** staff when dealing with customers, especially out of hours
- ✓ **Education & campus** teams working alone across large sites
