Sign and Acknowledge Commercial or Internal Documents With a Single Click

An easy and secure signature function for purchase orders, sales orders, delivery notes, expense reports, service requests, vacation requests, etc.

How It Works

Features & Benefits

Improve document workflow with digital signature integration

Numerous application-produced documents require signatures from either internal or external sources. Send a simple link via email and let business partners insert their name, date, and signature in one click, whether it's from a desktop, tablet, or smartphone.

Automate processes to handle large volume of documents

Compleo WebSign works alongside other Compleo modules for a smooth workflow. Accommodate up to 50,000 ERP, CRM, or BPM-produced documents a day with an entry configuration. Increase commercial document traceability with digital acknowledgment.

Approve easily, no pre-registration required

A centralized certificate handles signed PDF authentication. All traceability details are securely stored in the PDF itself. The ID card is part of the document and may be easily accessed, preventing the need to refer to a system log for investigations.

Connect recipients around the world

The easy-to-use Compleo WebSign online responsive interface is both iOS and Android-compatible and is designed for adaptability.

Uses

- Receipt and quote acknowledgment
- Purchase order validation
- Insurance, bank, and real estate contracts and more!
