

It's Time To Simplify Your Retail Operations

Deliver more appealing shopper's experience and drive up your retail productivity with Real-Time Point of Sale

In today's highly competitive business environment, retailers want to ensure the highest degree of customer satisfaction and grab every opportunity to increase revenue through improved store productivity. Real-Time Point of Sale (RPOS) is a full featured system that links the point of sale terminals to the Back End of SAP ERP system like accounting, warehouse, CRM & more. The solution has successfully achieved SAP certification and this underlines its long standing commitment to deliver direct integration and ease of implementation with SAP solution-based environment.

What Can RPOS Offer?

- Superior customer service
- User friendly interface that enables your employees to be more productive and customer-focused
- Highly scalable solution that can be deployed across multiple stores
- Highly configurable solution to adapt to your specific business needs
- Full integration with SAP CRM in order to drive better customer relationship
- Valuable promotion procedures that allocate targeted promotions across stores

Benefits

Deliver an Exceptional Customer Experience

With a friendly user interface, employees will be more productive and customer focused due to ease of use.

Retain Customers through Loyalty Program

The system includes a way to motivate repeat purchase through loyalty program that keeps your best customers coming back and spending more.

Monitor and Control Store Operations in Real Time

RPOS allows managers to gain up-to-the-minute information about the operations being accomplished in their retail stores. Whether you are operating a single or multiple stores in many locations, Our RPOS is scaled to your needs while providing a centralized data of all the transactions made in real time.

Successfully Manage Your Employees and Ensure Store Safety

Every cashier has his own username and password assigned in the RPOS. All the transactions made by the cashier are stored by day and time. This allows you to successfully manage and track your employees.

Designed With Flexibility

The solution has been designed specifically to streamline your retail daily activities and giving you the chance to boost productivity.

Main Features include:

Multilingual

The solution offers a multilingual feature so you can choose the language that you prefer to work with.

Multi-Currency

Enable your business to have the flexibility to perform sales with different currencies. You can choose the currency in which your customers wish to pay for their purchases.

Flexible Payment Options

RPOS supports multiple payment methods (Cash, Visa, cheque and loyalty Card) which streamline the process of transaction. With our solution you can process multiple payment methods for one sale.

Printing Customization

Easy to customize your receipt template to be displayed the way you want and you can automate receipt printing upon saving the document.

Customizable Interface

You can easily customize your application interface according to your preferences. You have the flexibility to change/ remove data fields, toolbar icons, screens, menu options. So you can have only the transaction fields that are frequently used.

Customer Management

Retaining your customers is one of the key factors for running a successful business. With SAP CRM integration you can calculate purchases over a period and change it to loyalty points. This is beside the integration with the Interaction center which allows automatic detection of new incoming orders (Supported with alert).

Enhanced Return Management

The solution offers an easy tool to manage the returned items. It has two types, either the return can be with reference (with predefined maximum days limit) or without reference.

Reporting Capabilities and Business Intelligence

Get proactively prepared for any challenge that might face your business with the powerful analytical reports based on real-time information.

Physical Inventory Counts

No need to close your store location to conduct a physical inventory counts. We offer you a powerful application by which this process is successfully managed easily and without effort. What you need is to scan the products in your shelves and the quantities are then deducted to reflect the actual left.

Loyalty Program, Discounts and Promotions

RPOS includes loyalty program that is designed to motivate repeat purchase and keep your best customers coming back and spending more. This will provide you with important facts about your customer's purchase behavior. Upon having all customers spending history, you can take this information to find ways to motivate them to come back into your store.

So how can you reward your customer for their visits?

- Assign customer discount, which are automatically given to a customer when they spend a certain amount of money.
- When a customer is making a purchase at the Point of Sale, you can instantly view the customers complete order history and loyalty status. From the RPOS screen, you can convert points into cash in order to pay for products.
- And a lot more.
