

Role Based Permission View App

Overview

	Description
Name	BizX RBP View
Use Case Addressed	<ul style="list-style-type: none">▪ Currently „View User Permission“ is available only if the user has full access to RBP▪ RBP View app allows the use all features of „View User Permission“ and „User Role Search“, <u>without</u> edit permission to RBP
Design and Access	<ul style="list-style-type: none">▪ Access the app via home page tile▪ Access can be defined for specific target groups▪ Fiori based design, consistent with SF Suite
Prerequisites	API user with necessary authorization for accessing the RBP data SCP Extension account
Benefits for Customer	Customers can separate „view permissions“ and „edit permissions“ for role based permission A typical business case would be to have the first level support check the permissions without having direct RBP access. For enterprise customers, in an off-shore / service center support based scenario, this would be an added advantage as the off-shore support / service center team can be given access only to the app
