

Answers at the Speed of Speech with Birchman's VoiceWorks

1. Access Data Quicker Than Ever

The best UI is no UI. Forget searching for answers to questions you need to know quickly. Birchman's VoiceWorks next-gen conversational UI works the way you do. Ask for what you need, and Alexa does the leg work.

1

Users start a conversation by simply saying "Alexa" followed by an instruction or question. The Finance team could ask for a journal update, colleagues in HCM might have a talent management question.

2

Alexa finds the answer in SAP S/4HANA Cloud or SAP SuccessFactors and guides the users to give any more detail to get to the answer they need.

3

Before updating any information, Alexa asks the user to validate each field and then confirms that S/4HANA Cloud or SuccessFactors has been updated.

2. Ever-Smarter Insights

The more you use it, the smarter VoiceWorks becomes. Machine learning understands priorities and preferences to give the real-time business insight you need quickly and efficiently.

"Alexa, ask Talent..."

- What is the number of approved job requisitions?
- What is the number of pending job requisitions?
- How many female employees do we have?
- How many male employees do we have?

"

- The current number of approved job requisitions is 19.
- The current number of pending job requisitions is 11.
- Current number of female employees is 480 from a total quantity of 1012. This represents 47%.
- Current number of female employees is 532 from a total quantity of 1012. This represents 53%.

"

SAP S/4HANA

SAP SuccessFactors

"Alexa, ask Finance..."

- What is the daily sales value for today?
- What is the month to date sales value?
- What was the daily sales value yesterday?
- What is the overdue debt value?

"

- The daily sales value today is £6,500.00
- The month to date sales value is £650,000.00.
- Yesterday, the number of sales was £35,800.00.
- Current overdue debt value is £250,100.00.
