

WerthAUDITOR

Innovative security software for SAP-Systems

Everything. Simple. Secure.

Werth IT GmbH knows the needs of business security for SAP systems and takes the specific IT security requirements very seriously. For this reason, the team of experts has developed with a high regard for quality an SAP security scanner that completely covers the auditing of SAP systems.

With the intuitive WERTH AUDITOR it consciously focuses on easy handling and meaningful result lists that are already used today by wellknown companies to manage their SAP security and solve the problem of increasing complexity and simultaneous shortages of skilled professionals.

FULL COMPREHENSIVE

WerthAUDITOR checks all security-related areas of SAP landscape to provide a reliable assessment of the security status.

AUTOMATED

Automated scans facilitate and speed up the audit and allow continuous security monitoring of a SAP system

AWARDED

Our product has been awarded by the Federal Ministry of Economics and Energy with the special prize for IT Enterprise Security.

MADE IN GERMANY

As a German Family business quality, reliability and trust are values we live on daily basis for our Partners and customers.

One product - Many possibilities.

WerthAUDITOR is an easy to use security solution for complete audits of SAP systems. The solution allows continuous and automated testing of elementary pillars of SAP security: Platform security (SAP-Application-Level, database, OS), source code analysis, permissions, patch management and Log analysis. Only taking account all safety- relevant aspects, an appropriate and meaningful measurement of the system-security is possible.

Fig. All security-relevant areas of a SAP landscape

- For security administrators, IT-Revision, CISO

Powerful features

WerthAUDITOR has a bunch of modern technology to fulfill all your SAP security requirements. Integrated is an advanced SAP Security Scanner for system check and code examination. Additional an intelligent logic to assess risks and identify security critical events in the SAP system is present. The package is rounded by generating detailed reports with risk prioritization and measures.

Full overview of system security

WerthAUDITOR verifies the secure configuration, the SAP user permissions, the Patch level, the ABAP code, the security-related events in the audit log and checks the SAP services for weaknesses. In addition, the security of the operating system and the database can be checked, too.

- Blackbox Pentest
- Whitebox security audit
- Identification of missing Security-Notes
- Compliance

Automated audits

Manual scans of a SAP system takes days. The automated audit with the WerthAUDITOR replaces this approach and provides nearly in real time easy understandable audit reports. Individual audits as well as a continuous monitoring can be automated with the WerthAUDITOR.

- Automated audits
- Time and cost savings
- Continuous security monitoring

Meaningful reports

Extensive and detailed reports for management and departments are just a click away. Step-by-step instructions to minimize risks are integrated. Several report types are available: The SoD matrix displays which users have which critical authorizations and combinations. The comparison report shows the development of system security over time. The of measures plan provides a risk based To-Do List with solutions in Excel format. Corrections to the SAP system can also be transferred automatically. The detailed report presents the audit results either for the management and / or departments. The identified risks are visualized by means of traffic lights.

- Comprehensive reports for management and departments
- Step-by-step solution instructions
- Automated correction
- Weakness visualisation by traffic lights

Simplified usage

WerthAUDITOR is easy to install. No changes to the SAP system are needed. Highly intuitive audit execution in only three steps: 1. Automatic target detectio. 2. Prepared audit templates for each audit case. 3. Audit execution with report generation. For the audit user an authorization role is automatically generated. With a few clicks periodic audits can be planned. Audit reports will then be generated automatically.

- Intuitive security audit in just three steps
- No modification of the SAP system required
- Automation cockpit to prepare periodic audits
- Automatic report generation
- Generation of fitted authorization roles

SAP security for your business.

Protect your data and systems using automated system corrections and detailed solution guides. Werth Auditor enables you to identify quickly new vulnerabilities and deviations from security requirements by using the automated security scans.
