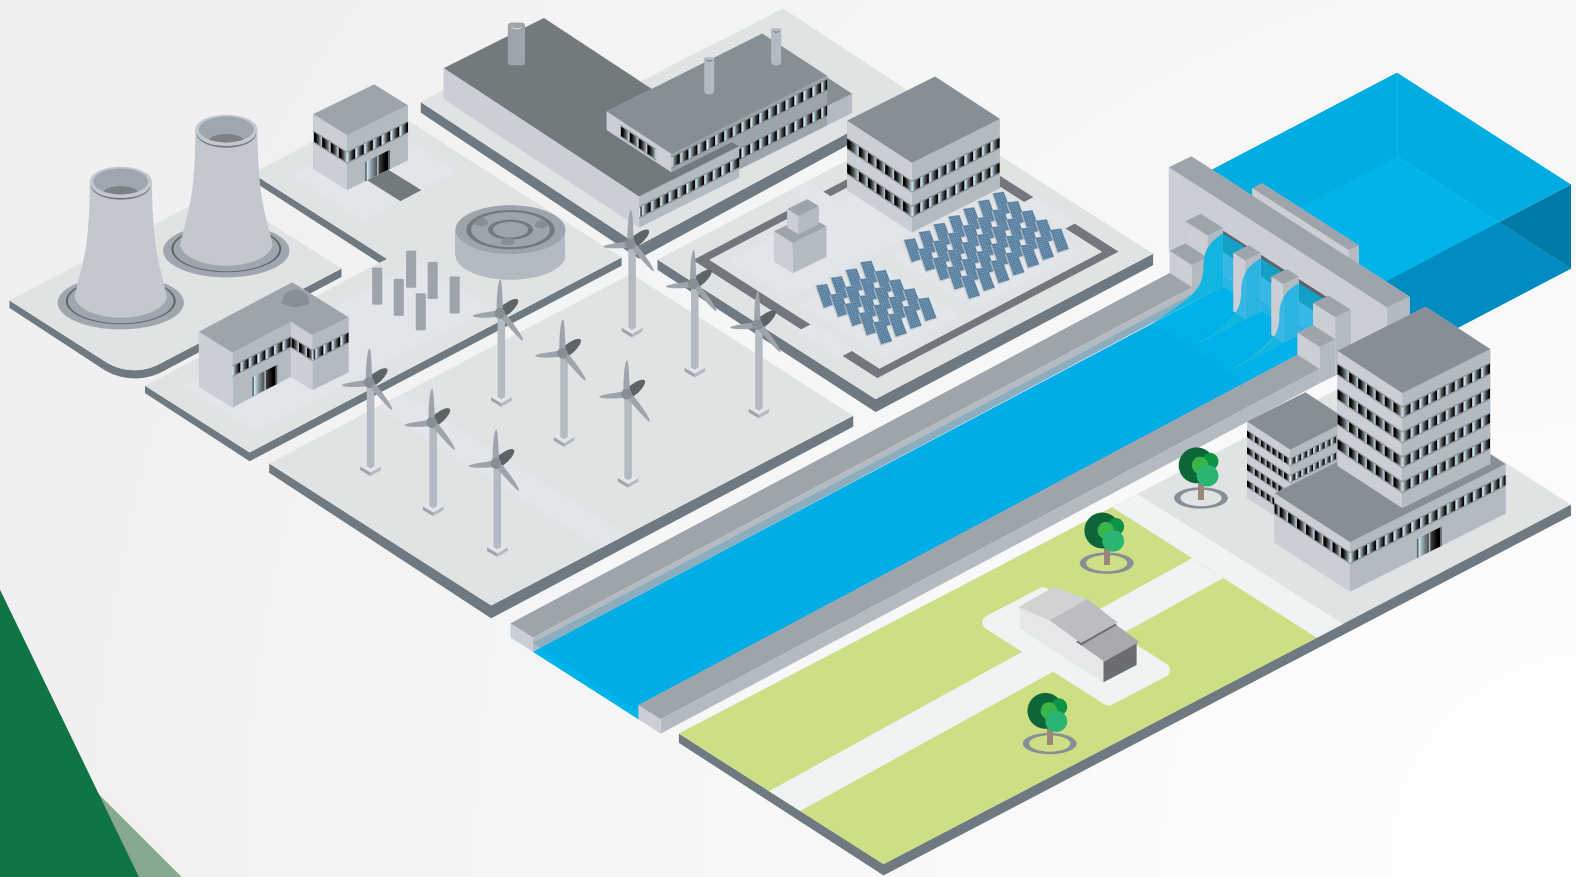

GRAPHIC DESIGN SOLUTIONS

Specialized graphic design solutions for EcoXpert's

- 2D illustrations
- 3D modeling & isometrics illustrations
- Libraries for segments
- One Line diagrams

For
EcoXpert[™]

TechiesEc began operations in 2017, offering graphic design and digital marketing services.

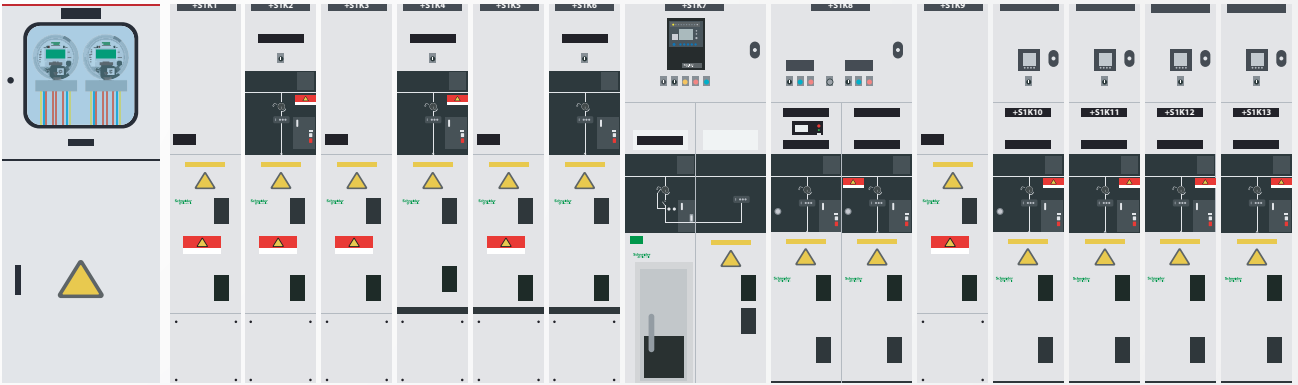

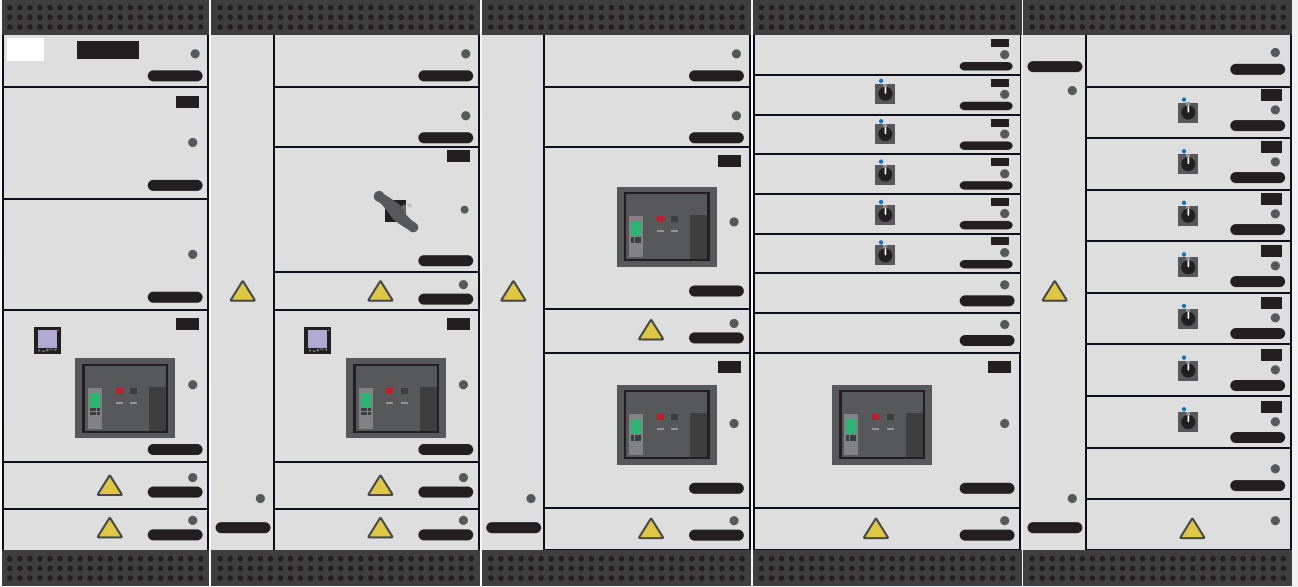

Since the beginning, our main objective was to deliver a high-quality and world-class interface in all our projects, which is why we have worked remotely and on-site on several projects around the world.

We believe that the graphical interface is the most important part in the execution of a project and on which a lot depends on the satisfaction of the final client.

Our solutions are aimed at satisfying the need for a good final presentation of the projects executed by Ecoxpert's

Libraries for segments and solutions

Projects need a homogeneous visualization in the graphic environment, our libraries services makes available to ecexpert's channels the possibility to deliver a project with a high quality interface.

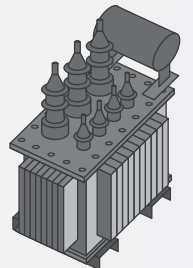

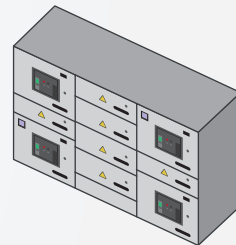

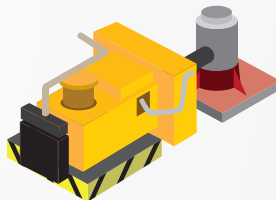

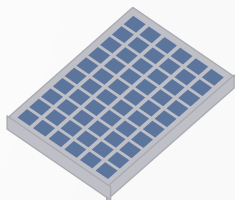

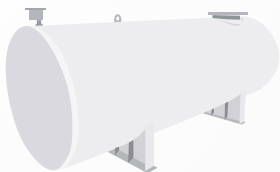

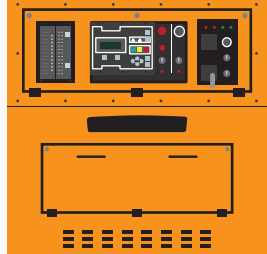

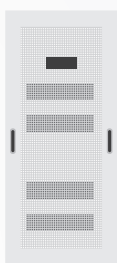

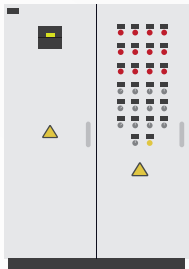

We have worked libraries ready to be acquired and the possibility to request fully customized libraries.

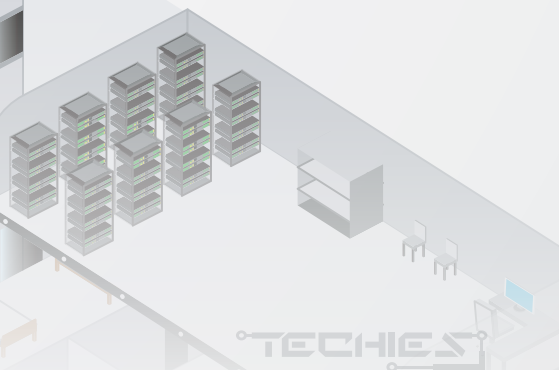

Examples of developed graphic elements available for use

- State flags and traffic lights
- Stopwatches
- Fuses & circuit breakers
- Status lines
- Gauges
- Navigation objects
- Panels
- Communication Status
- substation graphic elements
- And custom libraries

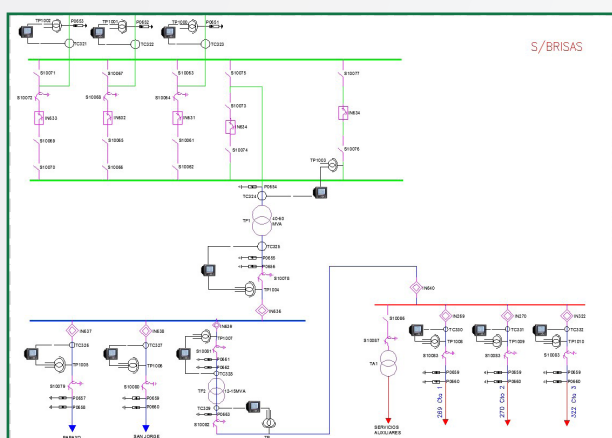

We can work in specific libraries for segments

One line diagram

The single-line diagrams are an important part of the projects, a correct distribution of the devices and the proper use of the lines facilitate the interpretation of the system.
