

Goods delivering Client-Shipping

Project: SAC Planning solution on Goods Delivering Industry across SD & APO Line of Business

Any Organization which deliver goods will try to forecast their demand using some predictive techniques, at times Customer Inputs will also to be added to get the proper Demand Forecast. Managers are responsible to forecast the correct demand for their corresponding responsible areas.

Situation

Problem

Customers use heterogeneous systems and different methods to forecast demand. SAP Analytics Cloud is a single platform to plan the forecast using different Predictive Algorithms and if needed manually using workflow feature (Input Task). Price planning is also a cumbersome process.

Prowess
enterprise
Driven By Skills

Our Prowess Analytics Team has developed an integrated analytics framework with a solution which would forecast the demand using **Predictive** as well as **Manual Forecasting** methods. Along with this, Price Planning and Revenue-Price Visualizations are also provided.

Solution

Result

The solution provides the base for forecasting demand using Predictive Algorithms or by using Manual workflow method and combine it with the Customer Inputs to get Proper Final Demand Forecast. It saves the time and need for different platforms to calculate demand.
