

# Lookout for Small Business, Lookout Threats and Lookout Comprehensive

## What's the difference?

Lookout takes a mobile-first approach to security. We secure mobility for the world's largest enterprises, the highest levels of government, hundreds of thousands of small businesses, and tens of millions of individuals worldwide.

Products	Best for...
<b>Lookout for Small Business</b>	Businesses without dedicated IT or security staff that need visibility and assurance that the mobile devices employees are using for work are secure.
<b>Lookout for Threats</b>	Organizations with IT and security teams that desire insight into sensitive use of mobile devices with protection from app, device and network-based threats.
<b>Lookout Comprehensive</b>	All the protections of Threats, plus deep insight and control for mobile app risks and device vulnerabilities, particularly for compliance reporting.

## Mobile security

Lookout for Small Business is an offering for organisations lacking IT resource but still needing visibility and assurance that the mobile devices employees are using are secure.

Lookout Threats provides detailed mobile threat event analysis across the mobile fleet and allows an admin to set automated remediation policies.

Lookout Comprehensive includes all the features of Lookout Threats with the addition of in-depth application analysis.

Monitoring data leakage through applications and the ability to blacklist applications is often an important consideration for maintaining GDPR / data compliance.

	Lookout Mobile Endpoint Security		
	Lookout for Small Business	Lookout for Threats	Lookout Comprehensive
<b>Phishing and Content Protection</b>			
Block access to phishing links across all apps	✓	✓	✓

## Integration and management

Lookout for Small Business provides a summary of mobile risks for all the mobile devices used in an organisation as well as executive level reports showing risk reduction.

Lookout Threats and Comprehensive integrate with leading IT and mobility solutions so organisations can leverage existing device and identity management tools. Designed for the enterprise, these products focus on giving IT and security admins more visibility into threats as well as creating automated risk policies and actions to maintain productivity without compromise.

Lookout Comprehensive includes management tools to help maintain company compliance by providing visibility and control into data leakage via mobile applications.

	Lookout Mobile Endpoint Security

API integration		✓	✓
Admin single sign on		✓	✓
Role based access control		✓	✓
Group-based policies		✓	✓
Custom policies for risky apps			✓
App blacklisting			✓
App upload and analysis			✓

## Remediation

Lookout mobile security has been known for achieving a 95% self remediation rate. It helps to keep users protected and also benefits both small and large organisations with limited helpdesk tickets.

In the absence of self-remediation, we also enable our Threats + Comprehensive Lookout admins to enforce remediation through integrations with leading MDM, MAM and IAM platforms.
