

A person in a black long-sleeved shirt, black pants, and red sneakers is captured mid-jump, clearing a horizontal blue line. The background is a lush green field.

VAT Validation

A C4C APPLICATION

Öffentlich

The world is how we shape it

sopra  steria

Motivation and Functions

— Motivation

- └ The verification of VAT Numbers when creating customers and prospects ensures **data quality** and safety
- └ Manual use of portals like BZSt and EU is always an obstacle and a vulnerable process
- └ Early detection of incorrect VAT Numbers is often an indication of a liquidated company

— Functions

- └ After entering a customer or prospective customer VAT Number, the application calls up the EU's webservice (VIES) or the XML-RPC of the „Bundeszentralamt für Steuern“.
- └ Users receive the result of the validation immediately, if name, address and Vat Number are correct.
- └ The application provides customizing for the translation of the messages issued by the interface. In this way, users are clearly informed about the result of the VAT check

Implementation

Best Practice

— Deployment by your Test-Tenant

- └ The error codes are supplied in German and English. Additional languages should be created using the C4C translation workbench
- └ A pre-configuration is delivered and should be tested and adjusted if necessary.
- └ The own VAT Number must be specified

— Deployment to your Productive Tenant

- └ Information for all involved users

— Rates

- └ 5.850,- Euro exclusive VAT including 2 x 4 Hours implementation support (remote)

Thank You.

Text on several lines.
