

cytric Travel Suite 2.0 for SAP Solutions

Integration - Overview

conovum Interfaces Overview

conovum is specialized in the development and provision of interfaces between cytric/cytric Expense and the various SAP modules. Our solutions allow for the transport and validation of data between the SAP modules and cytric. This improves the travel management process in a sustainable way and allows employees greater autonomy in handling their travel processes while reducing the risk of errors.

conovum Interfaces offer the following advantages:

- Connection of cytric and cytric Expense with one or more SAP modules
- Real time exchange and validation of data
- Webservice based communication
- Encrypted data transfer when using https and TLS 1.2 technology
- Complete tracking and control of data transmission
- No error susceptibility when editing files
- No semi-automatic batch interfaces

Components of the implementation process

The standardized implementation process guarantees high quality in all process steps. In this way, a risk-free implementation as well as a safe and reliable operation of the interface can be achieved. The customer profits from a clearly defined project result at every step of the way.

Nr.	Process Step	Information
1.	Workshop	Kick-Off / Workshop: Demand analysis and collection of relevant information for the concept.
2.	Conception	Specification of all demands, operational and administrative activities as well as technical documentation.
3.	Implementation	Implementation of the interfaces
4.	Test support / Go-Live	Test support and Hypercare activities

Why conovum?

conovum has been developing various interfaces between SAP and cytric for more than 15 years; no other company has more experience in this area.

Only conovum has more than 50 references in this area and can guarantee risk-free implementation with reliable content and timelines; no other company has realized more productive integrations.

conovum knows all prerequisites, dependencies and “stumbling blocks” within SAP and cytric for a successful integration of systems and processes.

conovum has both the business and technological know-how to integrate the technical entry and exit channels provided by cytric correctly, performantly and securely.

Only conovum works with cytric on the economic and technological development of interfaces and thus guarantees the continuous compatibility of interfaces.

conovum offers an exemplary operation security as well as first class support for the interfaces and the middle ware components.

The interfaces developed by conovum pass the yearly PCI-certification as well as audits for IT-safety and data protection.

Since its founding, conovum considers itself an innovation driver in the field of cloud-integration in SAP.
