

Acorsoft Reporting™

Unleash the Real-time Power of SAP Data with Excel

The Challenge

With more than 700 million users worldwide, Excel is still the No.1 enterprise data analysis tool for businesses, and plays a pivotal role in the BI processes.

To most SAP customers, being able to bring large volume, heterogeneous SAP data into Excel at real-time has become more critical than ever, for fast decision making in this fast-paced world. But there lacks a versatile solution to satisfy such requirement, due to the complexity of SAP data model, difficulty of SAP data access, and the amount of manual steps involved.

The Solution

Acorsoft understands customers' pain point when it comes to real-time SAP data analysis. As SAP Certified integration solution, Acorsoft Reporting functions as Excel Add-In to enable Excel based real-time analysis and reporting on SAP data, and truly delivers the self-service experience to businesses. It is powerful and easy-to-use, empowering decision makers with accurate, up-to-date data with high agility, high productivity, and low cost, and maximizing customers' investment on SAP.

The Benefits

Acorsoft Reporting enables self-service, real-time business intelligence and ad-hoc analysis in Excel on massive SAP data, to drive faster and better-informed business decisions.

- ▶ **Versatility, Performance and Scalability.** Acorsoft Reporting's unique sophisticated, intelligent, high performing and scalable engine makes it possible to bring large volume SAP data in different forms (*table, query, rfc/bapi, cube*) into Excel.
- ▶ **Real-time.** Fetch the accurate data from SAP at real-time, without any intermediate data hop.
- ▶ **Cost Savings.** Minimize the cost and dependency on IT resources. No need for additional hardware.
- ▶ **The Experiences.** Offer the true "plug-n-play", self-service, zero-code, and single sign-on user experience to let Excel interoperate with SAP with ease and productivity, without any custom coding, hefty macros, or VBAs.
- ▶ **Security.** Comply with SAP data access API standards and security model, along with multi-level encryption.
- ▶ **Quality.** Built with quality; certified by SAP.
