

WiFi solution for cranes

Leading company in steel production

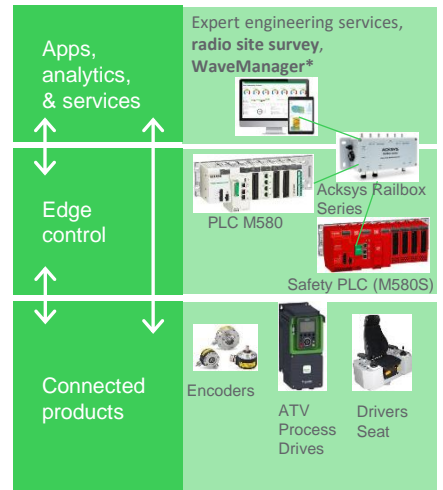

Customer challenges

- Increasing production by up to 30%
- Improving worker safety
- Reducing labor and maintenance costs
- Increasing availability of overhead cranes
- Increasing slab stack transfer rate
- Improving logistics processes

The solution

- Acksys' wireless offer perfectly complements the **Productivity** and **Safety** EcoStruxure Plant solution by enabling reliable and real-time communication between ground and on-board devices in a mobile environment.
- Easily scalable and versatile solution.
- WiFi solution suitable for short and long-range communications that operates independently of the environment, position and the number of overhead cranes or halls.
- Open solution compatible with all industrial protocols based on Ethernet (SafeEthernet, EtherNet/IP, Modbus TCP...)

Our Technology Partner

* WaveManager: centralized administration and configuration software for Acksys Wireless products.
