ActiveControl

Bridge the digital divide with agile and DevOps for SAP

Increase the pace of enterprise application delivery for faster, safer business transformation.

Thanks to an ever-expanding digital economy, the pace of technological and business change continues to increase. ActiveControl, part of our DevOps Platform, consists of four modules that let you unlock value by transforming the way you manage, enhance and understand your SAP systems. Shift to safe, responsive, more agile development practices that don't break production.

▶ Achieve continuous delivery: daily SAP release cycles become a reality
▶ Support digital transformation and the transition to S/4HANA
▶ Gain a competitive edge by accelerating time to market
▶ Increase quality, resilience and system stability to minimize business risk
▶ Dramatically reduce operating costs

ActiveControl key features

▶ Automate more than 90% of manual tasks, including build, approval and deployment

▶ Automatic transport sequencing and dependency management

▶ Backout changes to restore systems and avoid downtime

▶ Enforce code quality control and automate unit testing

▶ 50+ built-in analyzers highlight risks, impact and issues early

▶ Out-of-the-box integration with JIRA, ServiceNow, Remedy and more

▶ Automate conflict management and merge in complex multi-system project environments

▶ Central web dashboard gives visibility to distributed teams and enables collaboration

▶ Full audit trail enables straightforward regulatory compliance

Release Automation
Enable agile and DevOps
A fast, agile and collaborative SAP change management solution supporting continuous delivery to speed up release cycles. ActiveControl accelerates application delivery by automating workflow, approvals, sequencing, deployments and audit.

Control and Quality
Enforce quality
Shift quality control and testing to the early stages of the development life cycle through fully automated and integrated checks in the approval process. Identifies risks, impact, issues and test failures to speed up approvals, improve quality, and reduce errors and rework.

Continuous Improvement
Measure. Benchmark. Improve.
DevAnalytics delivers deep insight into the performance of SAP development and change process. Key metrics expose waste, inefficiency and bottlenecks, supporting continuous improvement.

Multi-System Development
Accelerate release cycles
An optional module, DevMax allows you to move towards smaller, more frequent releases by automating the merge and deployment of changes across parallel environments, automatically identifying and managing conflicts and accelerating and simplifying cut overs.
